„ZA“

When BaSys in 2001 – as the first German hinge manufacturer – presented a 3-D adjustable, concealed hinge, a new design trend was initiated in the door market. Not only the door leaf itself became flush to the frame, but subsequently the frame as well was brought to the same level as the surrounding wall. **The puristic design of the door elements often became the most important goal. As a logical consequence of this purism the frame now disappears completely – it seems as if the door leaf is fixed directly to the wall. What would be more suitable than a concealed hinge in order to merge door leaf and wall to an optical unit?** With the new model **PIVOTA® DX 80 3-D „ZA“** BaSys offers the opportunity to create an offset frame design in order to make the frame disappear in the wall. The hinge can overcome 15 mm offset in the frame! A well engineered mechanism provides the necessary hinge kinematics – offering the high stability which all concealed hinges from BaSys are known for.

The main aspects:

PIVOTA® DX 80 3-D „ZA“

- 3-dimensionally adjustable.
- Maintenance-free bearings for long life time.
- Stable joint design, as known from all models of the PIVOTA® DX product family.
- Load capacity: 80 kg.
